

DATAMIA, data collection solution

DATAMIA is a generic data collection system for web or mobile applications that offers advanced advanced features to design high performance data entry forms and to manage data collection.

DATAMIA is a very flexible solution, easy to use and adapted to everyone's needs. It can be adapted to many different contexts of use.

The solution allows you to create complex data collections from an easy-to-use tool! You can adapt your data collection at any time, work from an office or in the field, in connected or disconnected mode, on any type of device, configure access rights, etc. The functionalities are very extensive and allow for customization.

DATAMIA is a generic data collection system for web or mobile applications that offers advanced

advanced features to design high performance data entry forms and to manage data collection.

DATAMIA is a very flexible solution, easy to use and adapted to everyone's needs. It can be adapted to many different contexts of use.

The solution allows you to create complex data collections from an easy-to-use tool! You can adapt your data collection at any time, work from an office or in the field, in connected or disconnected mode, on any type of device, configure access rights, etc. The functionalities are very extensive and allow for customization.

With DATAMIA, you can :

- * **Easily design data collection forms**
- * **Collect data from these forms and exploit them**
