

Volunteer!

MEDES seeks volunteers all year round to participate in clinical trials.

These studies concern space research, on topics such as the simulation of microgravity, isolation, confinement, sleep, circadian rhythms, etc.

They also relate to clinical research, with studies in the fields of physiology, pharmacology, the assessment of biomedical devices, etc.

Participation in these studies is remunerated, with the amount varying according to the conditions and duration of the experiment.

Their duration can vary from a few hours to a few days for medical studies. Space studies can last for several weeks.

If you are interested in taking part in this kind of study, you can be added to the general MEDES volunteers file. You will then be contacted when the criteria you have provided meet the needs of a specific forthcoming study.

To register, please complete the [dedicated form](#).
